DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 2 is rejected under 35 U.S.C. 102(e) as being anticipated by Satou et al.

Re claim 2, Satou et al. discloses (Abstract, column 19-lines 1-32) an image reader in which an original is conveyed, first and second portions of the read image are compared, and the density difference is compared to a threshold value T1 (which is corrected on the basis of read image values, as described at column 18, lines 64-67). Based on the result of this threshold comparison, streak-shaped noises are detected in the read image.

Allowable Subject Matter

3. Claims 1 & 4-8 are allowed.

Art Unit: 2624

4. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

Re claims 1, 3, & 6-8, the art of record does not teach or suggest the recited selection of one of the two read image portions based on a detection of streak-shaped noise.

Re claim 4 (and dependent claim 5), the art of record does not teach or suggest the recited detection of steak-shaped noise specifically in one of the read image portions having a higher density value.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Fukuda et al. discloses an additional example of noise detection via density comparison
